## Eagle Eye SZ002 Extension Cable for Power Supply Quick Start Guide

The Eagle Eye SZ002 is an extension cable for use with a second solar panel or for a panel that is mounted further away from an Eagle Eye Cabinet System. It provides a solution for outdoor video surveillance without available power.

1

### Getting Started

We recommend reading these instructions fully before starting the installation.

**IMPORTANT** Keyed MC4 connections prevent improper connections. Color coding can be confusing, so the keying prevents improper connections even though the color coding changes at each junction.

2

**Measure the Site**

Before installing the SZ002 Extension Cable, measure the distance between the solar panel and the power supply.

3

**Attach the Cable**

Once the cable is attached, secure it with zip ties to the installation site.

4

**Protect the Cable**

A conduit can protect the cables in harsher environments. Measure precisely to ensure room for the connectors.

5

**Additional Installation Information**

For additional installation information, refer to Eagle Eye Application Note 075: Installing Two 100W Solar Panels on the Eagle Eye SS212 Anywhere Cabinet System.
